

Joseph Fajen

Documentation Systems Architect | Developer Documentation Specialist | Senior Technical Writer

Portland, OR | 530-264-6927 | joefajen@gmail.com | LinkedIn | GitHub

I don't just write documentation. I build documentation tools and systems from the ground up: information architecture, docs-as-code infrastructure, cross-functional workflows, and strategic content – transforming disparate communications into a single source of truth that's easy to search, navigate, and update.

AREAS OF EXPERTISE

Developer documentation	Docusaurus, MDX, OpenAPI/Swagger, information architecture, docs-as-code workflows, Git/GitHub
Documentation tool building	Python, TypeScript, JavaScript, Next.js, React, GitHub Actions
AI	Claude Code, LLM APIs (OpenAI, Anthropic, Gemini), Vector Databases, RAG Pipelines, Pydantic AI, Claude Agents SDK, MCP servers
Domains	Blockchain/Smart Contracts, REST APIs, Video Systems

EXPERIENCE

Input Output Global — Senior Technical Writer

2022–2025

Input Output Global (IOG), originally IOHK, is the blockchain research and engineering company that created and maintains the Cardano protocol.

- Authored and curated 17,900+ lines of documentation for a smart contract platform across 124 files over 13 months, accounting for 78% of repository commits and 59 merged PRs.
- Designed information architecture with 5 user personas and visual pathway diagrams; collaborated with engineers to integrate 91-schema OpenAPI specification and 41-page tutorial series.
- Built full-stack AI assistant indexing 2,500 documents from 8 sources, achieving zero detectable hallucination through 20+ prompt engineering iterations.

AJA Video Systems — Senior Technical Writer

Joseph Fajen

2016–2022

AJA Video Systems designs and manufactures professional video hardware and software for broadcast, post-production, streaming, and ProAV markets.

- Owned documentation for flagship streaming products, including the company's most complex hardware-software systems.
- Identified gap in customer-facing developer resources and initiated the company's first REST API documentation, enabling customers to control equipment remotely via browser.
- Ensured accurate documentation by configuring multi-product setups and tracking signal flows from source to destination.

Ensemble Designs — Senior Technical Writer

2008–2016

Ensemble Designs manufactures video signal processing and routing equipment for broadcast, post-production, and live event production.

- Documented signal processing products across the Avenue and BrightEye NXT product lines for broadcast and mobile production markets.
- Owned documentation for the company's most complex products—the Avenue 9430/9440 flexible matrix router and BrightEye NXT compact routers—featuring innovative configurable I/O that broke from industry-standard fixed architectures.
- Built eight years of domain expertise in professional video technology, enabling immediate productivity when transitioning to AJA Video Systems.

EDUCATION

Agentic Coding Course — Dynamous, 2025–2026

Systematic methodology for AI-assisted development: structured prompt templates, deliberate planning, and context engineering using the PIV Loop (Plan → Implement → Validate) framework.

Hands-On Linux System Administration — Packt, 2024

The Git & Github Bootcamp — Udemy, 2023

Comprehensive coverage of Git workflows including branching, merging, rebasing, and GitHub collaboration patterns essential for docs-as-code infrastructure.

B.A., History and Philosophy — U.C. Davis, 1989
