

Joseph Fajen

Staff Technical Writer | Documentation Systems Architect | Developer Documentation

Portland, OR | 530-264-6927 | joefajen@gmail.com | LinkedIn | GitHub

Technical writer who builds tools—documentation systems, full-stack AI assistants, custom agents. I dig deep into complex systems to translate chaos into structure and create authoritative sources of truth.

SKILLS

Documentation	Developer Documentation, Docusaurus, MDX, OpenAPI/Swagger, Information Architecture, Docs-as-Code Workflows
Development	Python, TypeScript, JavaScript, Next.js, React, GitHub Actions
AI/ML	LLM APIs (OpenAI, Anthropic, Gemini), Vector Databases, RAG Pipelines
Current Focus	Claude Code, Pydantic AI, Claude Agents SDK, MCP servers
Platforms	Git/GitHub, VS Code, Jira
Domains	Blockchain/Smart Contracts, REST APIs, Video Systems

EXPERIENCE

Input Output Global — Senior Technical Writer 2022–2025

Input Output Global (IOG), originally IOHK, is the blockchain research and engineering company that created and maintains the Cardano protocol.

Owned end-to-end documentation for complex smart contract and API platforms, digging deep into distributed systems architecture to translate complexity into clarity. Transformed fragmented multi-repository content into unified, authoritative resources designed for diverse developer audiences.

- Authored and curated 17,900+ lines of documentation for the Marlowe smart contract platform across 124 files over 13 months, accounting for 78% of repository commits and 59 merged PRs—transforming fragmented multi-repository content into a unified resource.
- Designed information architecture with 5 user personas and visual pathway diagrams; collaborated with engineers to integrate 91-schema OpenAPI specification and 41-page tutorial series.
- Built full-stack AI assistant indexing 2,500 documents from 8 sources, achieving zero detectable hallucination through 20+ prompt engineering iterations.
- Re-architected Plutus/Plinth documentation structure and led platform migration from Read the Docs to Docusaurus; expanded Blockfrost Platform API documentation by approximately 60%.

AJA Video Systems — Senior Technical Writer

2016–2022

AJA Video Systems designs and manufactures professional video hardware and software for broadcast, post-production, streaming, and ProAV markets.

Identified documentation gaps and built solutions—including the company's first comprehensive REST API reference. Documented complex professional video systems spanning hardware, software, and streaming workflows. Established structured review processes and advocated for tooling improvements that benefited the broader team.

- Progressed from documenting mini-converters and processing cards to owning documentation for flagship Bridge Live streaming products—the company's most complex hardware-software systems.
- Identified gap in customer-facing developer resources and initiated the company's first REST API documentation, enabling customers to control equipment remotely via browser.
- Operated prototype equipment hands-on, configuring multi-product setups and tracking signal flows from source to destination to ensure accurate documentation.

EARLIER EXPERIENCE (2001–2015)

- Ensemble Designs (2008–2015): Video signal processing documentation
- Technical Consultant (2008–2012): HP and enterprise clients
- New College of California (2005–2007): Web platform transformation
- Remend & Centrata (2003–2004): API/SDK documentation
- H5 Technologies (2001–2002): Knowledge management platform

EDUCATION

B.A., History and Philosophy — U.C. Davis, 1989
